In the world today, the daily demands facing all of us are unquestionably overwhelming. Balancing work, family, friends, finances, recreation and our health can be a daunting task for anyone. But what if you could get some help — a little boost to get you through an active day — simply by unleashing natural energy contained within your body? What if didn’t require another mile on the treadmill, an extra hour of sleep or a handful of vitamins? What if it was as simple as wearing a pair of patches under your shirt? Would you do it?

With LifeWave technology, such a phenomenon is possible...and it’s based on actual science. Using basic electromagnetic principles and a patented nanotechnology, LifeWave patches redirect the body’s own energy flow, augmenting fat utilization in the musculature and ultimately increasing endurance and stamina. Often times the results are immediate, sustainable and eerily real — “actual results obtained from users range anywhere from an eight percent improvement to a 400 percent improvement.”

HOW DOES LIFEWAVE WORK?

Passive orthomolecular structures (water, Oxygen, electrolytes, amino acids) contained within LifeWave patches leverage the thermomagnetic field and temperature gradient (from the core to the extremities) occurring naturally within the body. By maintaining a molecular rotation parallel to the plane of the body’s electromotive field, these structures can facilitate electron flow, increasing stimulation of neurons and ultimately enhancing muscle fiber contraction. The patches are non-transdermal and completely safe, yet they are able to act as a sort of “electromagnetic antenna,” passively manipulating electrical information to specific parts of the body. Akin to a conductor of electricity, “the interaction between the patches and the rest of the body is not unlike the effect that occurs in an electrical generator in which electricity is produced from moving magnets or magnetic fields.”

The increase in stamina and endurance often observed with LifeWave patches has been attributed to greater muscle fiber recruitment. According to the inventor, David Schmidt, “It is presently believed that only a small percentage of muscle fibers in a given group (for a given nerve impulse) are actually utilized to perform work.” Therefore, LifeWave recommends wearing the patches during exercise — the more strenuous the activity and the more conditioned the muscle group, the more effective LifeWave can be.

GET IN TUNE WITH LIFEWAVE

It is suggested that the patches be worn every other day — a month’s supply (15 pairs of patches) is relatively inexpensive, costing less than $100 a month. They are currently available online or directly through a LifeWave distributor. For more details on the patented nanotechnology, as well as fascinating testimonials (from elite athletes to everyday exercisers) and more precise pricing information, be sure to visit www.lifewave.com/superpatches or www.lifewave.com/getstrong.
